SAVES ENERGY

- Sanitary
- Lightweight
- Reliable
- Durable
- Time-Saving
- Spill-Proof
- Sturdy
- Easily Emptied
- Odorless
- A Clean Bowl
- With Each Flush

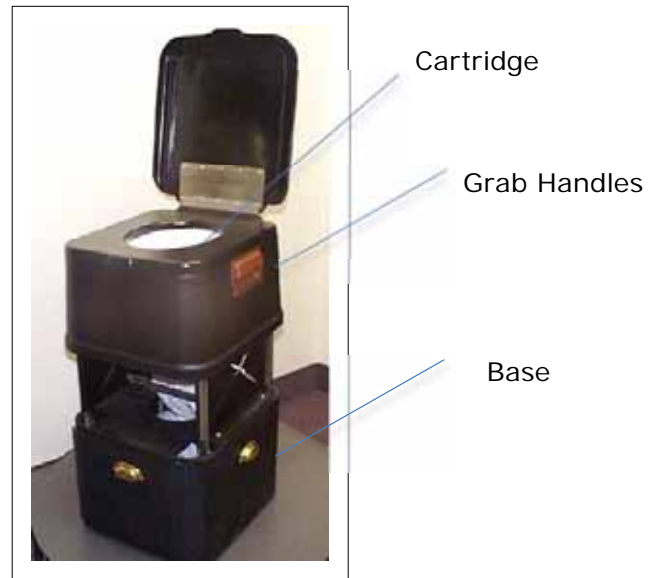

HELPS PREVENT POLLUTION

The National Environmental Health Association states, " The Uncle Jon Dry-Flush Toilet will be an asset to good environmental control."

Here's How Uncle Jon Works:

TO START THE DRY-FLUSH CYCLE
Top raises easily. Grab handles pull fresh plastic from cartridge as the soiled liner automatically moves down to the base compartment.

LOWER TOP & UNIT READY TO USE AGAIN
Wastes and odors are out of sight and safely stored in the base. A new section of the plastic liner has been pulled down to make a fresh sanitary bowl ready for its next use.

THE SECRET IS THE PLASTIC SLEEVE CARTRIDGE

No water, chemicals or complicated mechanisms. The cartridge hidden under the seat does the work. After approximately 40 flushes, the waste storage container in the base of the unit and its contents can be disposed of easily.

UNCLE JON IS SANITARY/SIMPLE

Designed for outside workers, this patented system allows safe and convenient waste disposal for industrial or commercial use.

This revolutionary dry-flush system is the simplest available for indoor or outdoor use. With complete operating ease and mobility, there is no contamination and no spillage in this safe and sanitary unit. Accepts feminine hygiene products.

HERE'S HOW UNCLE JON WORKS

TO START THE DRY FLUSH CYCLE

The user simply drops her/his waste product from cartridge as the toilet liner and waste automatically move down to the base compartment.

LOWER TOP AND UNIT IS READY TO BE USED AGAIN

Waste and odors are sealed away, out of sight and then is safely stored in the base. A new portion of the plastic liner has been pulled down to make a fresh sanitary bowl ready for its next use.

THE SECRET IS THE PLASTIC SLEEVE CARTRIDGE

No water, chemicals or complicated mechanism. The cartridge rolls under the seat does the work. After approximately 30 flushes, the waste storage container in the base of the unit, and its contents, can be disposed of easily.
